UP-700

UP-600

Custom Expandability Makes the UP-700 the Ideal Choice for the Hospitality Industry

•Models shown include optional extras.

Efficient and reliable operation is an important key to a successful business. And to help you run your retail or hospitality business more smoothly, the UP-600 and UP-700 POS terminals are packed with a wealth of advanced features and convenient functions. These include a multi-line operator display for easy operation, an Ethernet in-line system for efficient sales data management, accurate barcode entry, and Menu/Condiment/Combo PLUs that can be registered quickly and easily. So give your business the streamlined operation it needs — give it a Sharp UP-600 or UP-700 POS terminal.

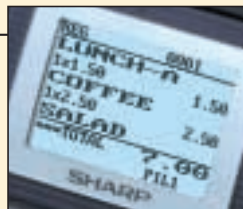

Outstanding Features of the UP-600 and UP-700

Stylish design

The sleek, modern design of the UP-600/700 blends easily into any interior and can add a touch of elegance to your shop, bar, club or restaurant.

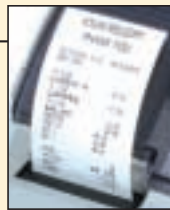

Large, multi-line display

The backlit LCD operator panel shows 8 lines of information at a time, such as items, prices and other relevant data, for quick confirmation even in low-light environments. The display can be tilted for better viewing.

Quick and quiet thermal printing

GST compliant receipts in "Tax Invoice" format are silently printed on 58 mm-wide paper at a speed of approx. 17 lines per second. Detailed information such as sales items, cashier's name, messages and even a Graphic Logo can be printed, helping to further promote your business.

Easy barcode scanning

If during a sales transaction a scanned item comes up as unregistered, you can register it on the spot by simply scanning the barcode and entering the price and department number. The product will be instantly added to the master product file for later maintenance, allowing you to run your business even more efficiently.

UP-600

UP-700

•Models shown include optional extras.

In-line communication

The optional Ethernet interface board lets you create an in-house network by connecting up to 63 "satellite" terminals to a "master" UP-600/700. Through this high-speed in-line system, the master terminal can collect and process sales data from the satellite terminals as well as send out preset data.

Customisable flat keyboard (UP-700)

The UP-700 lets you customise the arrangement of the keys any way you like to accommodate your specific business and application requirements. If you are upgrading from an older machine, you can arrange the new keyboard to be consistent with the old one, reducing both training time and errors. You can also switch between up to three PLU menus - a convenient feature for restaurants that change their menus or prices depending on the time of day.

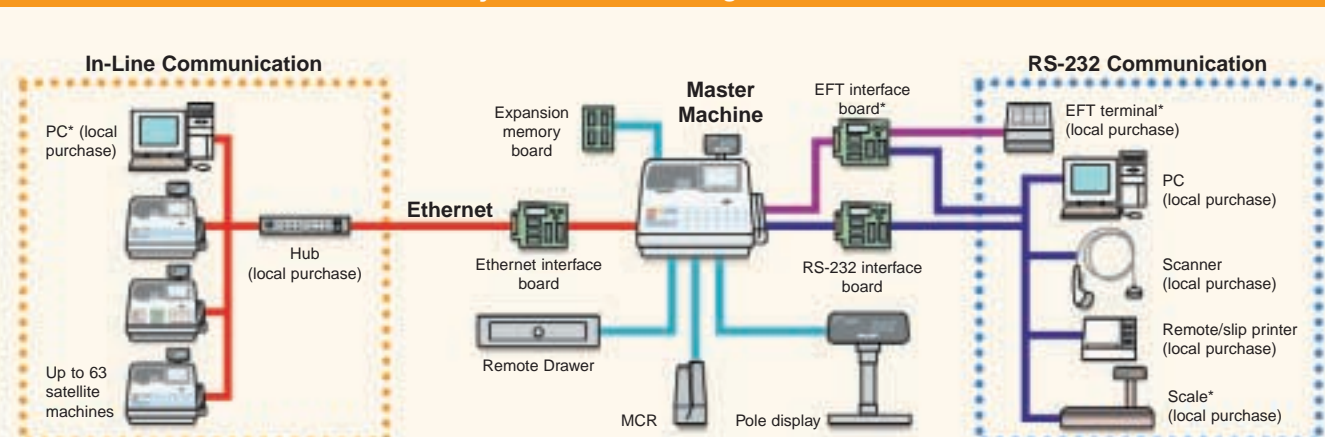

Training mode

This mode allows cashiers to practice operating the UP-600/700 without affecting actual sales figures.

Other features

- GST Compliant
- Large LED customer display
- Two RS-232 interface ports (max. 4 ports)
- High-capacity lockable cash drawer
